EDUCATION

The Pennsylvania State University, University Park PA

Expected Graduation: Dec 2024

Bachelor of Science in Computer Science

GPA: 3.7/4.0 | Dean's List (5/5) | Technical Coach @ [CodePath](#) | AlgoPSU Captain @ [ACM](#) | [Recommendations](#) | RA

Relevant Coursework: Data Structures and Algorithms, Math of Machine Learning, Operating Systems Design, Systems Programming, [Supervised Machine Learning](#), [Advanced Learning Algorithms](#) (Deep Learning), [Generative AI with LLMs](#), Theory of Computation, CodePath: (Intermediate+Advanced) Software Engineering, Database Management Systems

TECHNICAL SKILLS

Programming Languages: Python, C/C++, JavaScript, Java, HTML/CSS, MATLAB, Verilog, Assembly (64/32-bit x86)

Frameworks & Tools: TensorFlow, Scikit-Learn, NumPy, Node.js, React.js, Next.js, GraphQL, RESTful APIs, LaTeX, Git

Softwares: [AWS](#), GCP, LLMs, MS SQL Server/MySQL/PostgreSQL, Linux/UNIX, SonarQube, Postman, Bitbucket, JIRA

WORK EXPERIENCE

Software Engineer Intern

Aug 2024 - Present

Materials Research Institute (2DCC-MIP Team), Penn State University

University Park, PA

Software Engineer Intern

May 2024 - Aug 2024

Hughes Network Systems, LLC (Aeronautical Team)

Germantown, MD

- Automated AWS-to-BigQuery pipeline with strict row-level validation & GCS audit trails, cutting manual processes by 95%
- Developed Python frameworks and BigQuery SQL views for KPI evaluation on monthly aircraft and fleet performance, processing 61k+ Delta Airlines flights' data with O(1) time complexity and sub-10-second execution
- Designed an automated script for flight performance billing and performance-based adjustments ensuring accurate invoicing
- Utilized: Python, Google Cloud Platform (GCP: Cloud Functions / Cloud Run, BigQuery, Pub/Sub), SQL, Agile/Scrum

Machine Learning Engineer Intern

Jan 2024 - May 2024

Materials Research Institute (2DCC-MIP Team), Penn State University

University Park, PA

- Leveraged 3 SOTA LLMs (GPT-4, Jurassic2, and Llama2) for chatbot-integrated answer retrieval using the RAG Model
- Architected a Next.js app with end-to-end AWS integration, optimizing RESTful APIs for scalability and deployment
- Automated Python-based AWS Lambdas for video processing and transcription, handling 50% user upload surge
- Implemented AWS Rekognition for image analysis, improving content tagging accuracy and streamlining data processing
- Utilized: Python, Amazon Web Services (AWS), Next.js, LLMs, Deep Learning Models

Software Engineer Co-op

May 2023 - Dec 2023

VIAMI Solutions Inc.

Germantown, MD

- Collaborated with the 6-person R&D team to architect and implement a Python-based automated test suite on Linux systems for PNT instruments, ensuring exhaustive test coverage and strict compliance with the SCPI protocol
- Debugged PNT unit source code in C/C++, leading to a 55% reduction in bugs and a 30% increase in code coverage
- Executed 35+ long-term tests on core devices using SCPI commands, ensuring adherence to release-level quality standards
- Utilized: Python, C/C++, SCPI Protocol, Bitbucket, Confluence, SonarQube, Git, Agile, JIRA

Software Engineer Intern

May 2022 - May 2023

Materials Research Institute (2DCC-MIP Team), Penn State University

University Park, PA

- Engineered a React.js app, designing 50+ user-facing features across 20+ REACT components (utilized Jest testing)
- Integrated an MS SQL Server relational database to manage data from 500+ instruments across 18+ tables
- Automated Python scripts for data retrieval, manipulation, and integration with robust error handling and efficient filtering
- Research: Developed a Python library for the [Raman Fitting model](#), enabling deconvolution of Raman spectra. The library facilitated interactive preprocessing, effective fitting, and data export, reducing analysis time by 40% (tested)
- Utilized: Python, JavaScript, React.js, Node.js, MS SQL Server, RESTful APIs, Git, HTML/CSS, JIRA

PROJECTS

Dynamic Memory Allocator [C/C++]

Jan 2024 - Feb 2024

- Designed custom malloc, free, realloc; segregated free lists and footer optimization to improve memory management
- Achieved a utilization score of 69% and benchmark throughput at 100% across diverse computing environments

mdadm Linear Device [C/C++, Linux]

Feb 2023 - May 2023

- Configured 16 disks of size 64 KB as a 1MB linear device, providing users with a unified address space for data access
- Implemented mount/unmount operations to the linear device, mitigating potential data loss and system crashes
- Designed the read/write functions and engineered data caching solutions reducing I/O wait time by 60%
